

Prompt given : furious lion with wings flying in the sky side view

Different images generated by ai's:

1. Magic studio

2. Leonardo

3. Deepai

Observation made:

The prompt I have given is "furious lion with wings flying in the sky side view"

In the image generated by magic studio is good and aligns with the prompt I have given but it is looking mostly like a painting.

The image generated by Leonardo is looking good with vibrant colors and is looking like 3d model. I feel everything is ok but it doesn't align with the prompt I gave perfectly. I gave the prompt to generate an image with a furious lion but the image generated has a calm lion and as for the image generated by the Deepai, it looks perfect for me, the colors are vibrant and the image looks realistic and more over it perfectly aligns with

the prompt I have given . so the conclusion is , from the three ai image generation models I used Deepworks is the best
